Accomplishments:

I have learn a lot from this project. The days spent looking through my code to debug it was well worth when it finally worked as intended. I also had no prior experience in Javascript and it was a challenge to learn React. I feel like I have grown as a person and a coder with a never give up attitude. I have learnt more from this project about how websites are designed and made and the considerations that go into making websites. I have learnt how to better research for materials online in order to accomplish what I need to do.

User Manual:

1) To add items to the todo list, click the add button and type in the Title and Category.
2) It will then redirect to the home page where you can click on the category to access the todo list items.
3) Clicking the done button will cross out the item.
4) Clicking the edit button will allow you to change the title of the item
5) Clicking the delete button will delete the item.
6) Clicking the add button from the categories page will bring you to the add page, the category will be filled out for you, you only need to specify the title.
7) The back button will be bring you back to the previous page.
